

Project 1

Classic HTML Document

Due: Tuesday, October 8
(three weeks from today)

Project 1

- Like Lab 4 ...but different
- New content; a person
- Content drives structure
- Do **not** use...

`<header></header>`

`<article></article>`

`<aside></aside>`

`<footer></footer>`

...you can use those elements, but not in that exact way

Project 1 Structure

- See: [w3schools.com](https://www.w3schools.com/html/html5_semantic_elements.asp) "New Semantic/Structural Elements"

- Typical:

HEADER

NAV (not yet)

MAIN

ARTICLE

SECTION

ARTICLE

ASIDE

FOOTER

- No content in-between the structural elements (think *scaffolding*)
- Remember: can use elements multiple times! (except MAIN)

Other Notes

- FIGURE and FIGCAPTION - not required
- Required: data table
 - Know what is a "data table"
 - No "inline styles"
 - No old fashioned styling attributes: `cellpadding` or `cellspacing`
 - OKAY to use (actually, required for Project 1):
the old fashioned attribute "border"

```
<table border>
```

```
...
```
